## About this Document

This document is about the features and functionality of web based trading terminal through which a user can place order either buy or sell and perform trades along with the functionality to view market stats in real time. This document intends to guide the user of the application about all views and windows along with customization options available so that user of the application can use it effectively.

## Audience

This document is all about the features and usage of Web trading terminal. It is intended for all the users of online trading.

## Conventions

CONVENTION / STYLE	Purpose
<b>Bold</b>	Name of application objects, e.g. menus, screens, buttons etc.

## Screen Name: Introduction

Web trading terminal is an online trading application that offers the ability to buy and sell shares and stock information in real time. The Trading Terminal is a browser supported system and application based on JAVA which supports Google Chrome, Mozilla Fire Fox ,IE9, Opera and Safari. Users must have JDK tool kit prior installed on their machines along with web link configuration. The application runs on Jetty server and TOM CAT server and Glass Fish. Jetty is recommended.

### WEB LINK CONFIGURATION:

Following are the pre-requisite for Web Link Configuration. These components are responsible for various sever side operations Web Link Configuration with functional IP's Files are deployed in

1. Message server
2. Trading Engine
3. Feed Server
4. Feed reader
5. Fix Gate Way

The client gets connected with the trading servers. A main component is message server which is connected with a trading engine. Trading engine is responsible for executing trades

All basic views and operation are available in trading perspective like market statistics for different stocks are available. These viewpoints also provides exchange metrics through number of watch lists e.g New Watch List, Index watch list, Market watch list etc.. Order and Trade lost views are maintained which keep record of all pending orders and executed trades respectively. Users has provided with the facility to buy and sell trades or can cancel the trade if require. Different activities of the clients are shown on message board in real time. Different types of Reports are also available for user ease. Reports section includes Payment Request, Periodic Trade Detail, Periodic Trade Summary, Custody net share, Outstanding Order report, Orders List Cash book detail and Client portfolio position.

All of the views can be customized according to the user preferences and customization persists even after logout from the application and is restored on Login.

**Screen Name: Getting Started**

Navigation:

This screen is about User Login. Each application user is provided with unique username and password. Once correct user name and password enters the application verifies the user name and password an logged in to the User main page.

Figure 1: Login Window

**LOGIN:**

*Screen Explanation*

Field	Function
User Name	Enter Correct user name as allotted
Password	Enter correct password provided to the user
Sign In	Click on to sign in for Log in to the main Page
Sign Up	New online account request launched by the user by filling registration form

## Screen Name: Incorrect User Name and Password

This is about if user has enter wrong Username and Wrong Password. Following message appears if any one of the required informatin is invalid. Password Policy is applied on the Login window by the administrator. Number of Invalid attempts will block the user and only be released after being contact with the administrator.

The screenshot shows a login form with the following elements:

- LOGIN** (header)
- Username:** [input field]
- Password:** [input field]
- Sign In** (button)
- Invalid user name or password** (error message in red text)

Figure 2: Invalid User name and Password

**INTERMARKET**  
SECURITIES LTD

## Screen Name: Application startup:

After verification of the user name and password, application will load the main page. The Main page consists of all the information required for the user.

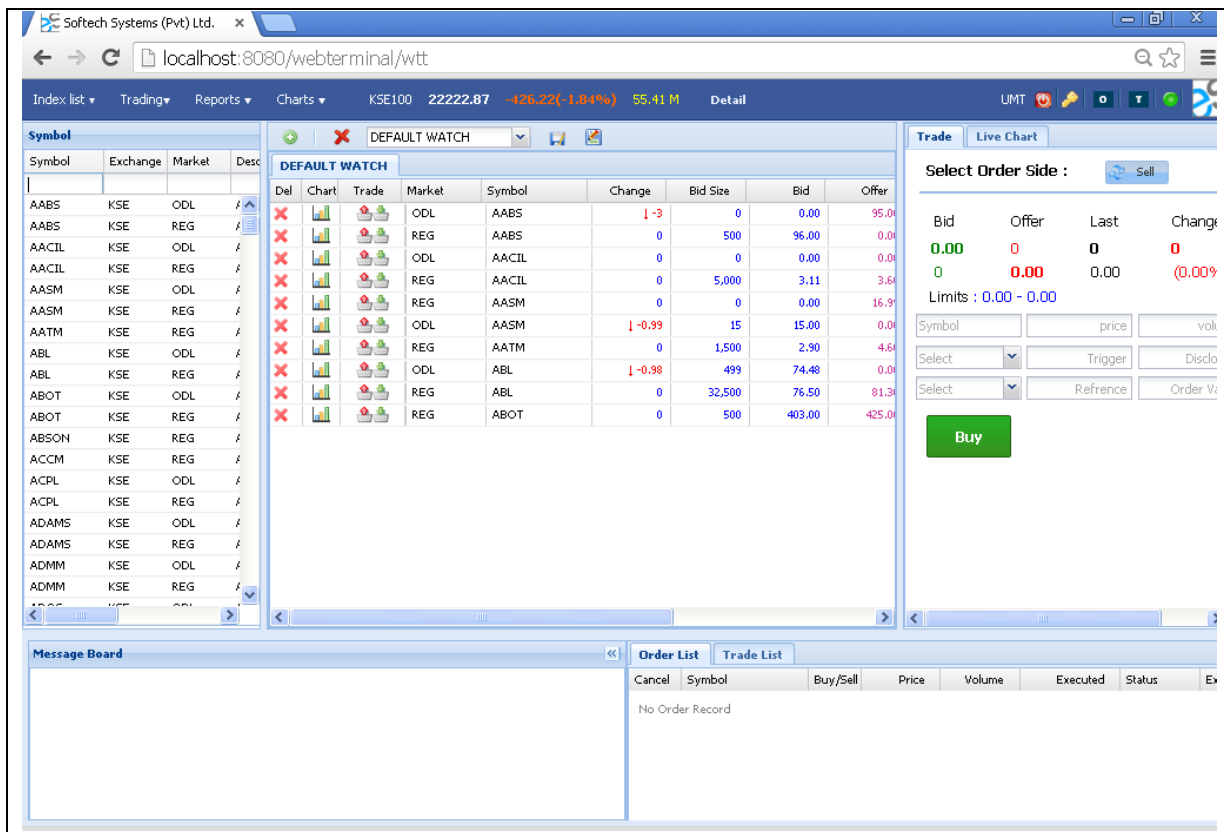

Figure 3: Application Startup

Field	Function
	If user properly connected, the button will turned Green on successful connectivity.
	If connections are not established properly with the servers, than button will turned red, that indicates the non-connectivity of the application
<b>Display Name</b>	On successful Logged in, user name will display on the menu bar
	This button will provide the Log Out Facility to the User.
	This button is used for change password if required by the user.
 Order Notification	This button is used to refresh the Order
 Trade Notification	This button is used to refresh the order.

**CHARTS:**

## SCREEN NAME: INTRA DAY CHART

Live chart option is available in market watch. On simple click live chart window will load and display the result. Live chart option is available against each symbol. User can enable or disable the chart by clicking on **TURN OVER**. X-axis represents the time range and Y-axis represents volume range. Refresh button will update the chart on real time basis.

Figure 26: Intra Day Chart

## SCREEN NAME: TIME LINE CHART

Time line is a chart that depicts how a set of resources are used over a period of time. In this chart user can view organized sequence of events in the order in which they occur. Selection based criteria is available for the user to view the chart. First select the option of Time Line Chart than enter symbol and hit load to view the chart.

Chart can be analyzed for different period of time like 1 month, 3 month, 1day, 5 day, 1 year and max( depend on the data stored for number of years in database. If we are having data for ten years than the graph for the chart created for ten years).

User can use the chart inspector to set the period. Period is defined in terms of years.

Figure 27: Time Line Chart

## SCREEN NAME: CANDLE STICK CHART

A candle stick chart used primarily to describe price movement of a security, derivatives, or currency over time. Each bar represents the range of price movement over a given time interval. User require to select the type of graph as Candle stick chart and then select symbol and press load button to load the chart. Period translator machine is given below to select the period range for a graph.

1. **Fill Bar** 

A filled bar, usually blue, is created when a security's closing price is greater than price at which it opened.
2. **Fill bar with upper stick** 

Upper stick on filled bar show the max level of high price. It means highest price for the day.
3. **Fill bar with Lower Stick**

Lower stick show the min level of low price. It means lowest price for the day.
4. **Empty Bar** 

An empty bar, is created when a security's closing price is below the price at which it opened.
5. **Doji lines:**

Illustrate periods in which the opening and closing prices for the period are very close or exactly the same.

Figure 28: Candle stick

**Y-axis:** Represents the Volume  
**X-axis:** Represents the Date and year

# INTERMARKET

## Screen Name: Comparison chart:

Comparison Chart is used to compare different shares for specific period of time. This combination chart is a best possible graphical representation for analysis of different symbols. Symbols are distinguished with red and blue colors. Symbol input field allow to select two symbols. Max two symbols can be selected. Y-axis represents the volume and x-axis represents the date and year over a define period of time. Time period can be defined from below given scroll option. Normally one year comparison will be allowed.
